

Patient Testimonials of Their Experience With Overnight Corneal Reshaping Lenses

"My [OCR] lenses have made so much in my life today possible! By only wearing the lenses at night, many of the inconveniences of modern daytime contacts can be avoided. Playing sports can be risky with daytime soft contacts due to the risk of the contacts falling out, but because I use [OCR] lenses I can play basketball, volleyball, and golf and run, swim, cycle without worrying. Chemistry class is also less stressful, as soft contacts are not allowed due to the possibility of a chemical splash. As I don't wear contacts during the day, this is not a problem for me. I've been wearing contacts every night for several years now, and any discomfort from them has all but vanished. The biggest problem I face with the, is when someone asks if I wear contacts, and I have to reply "sort of"!"

Kieran K

"My daughter started wearing [OCR] lenses at 11 years old. In the beginning it took some time getting the lenses in. Within a few weeks it was routine. Missing the odd night when she is up late isn't a problem. She plays sports, swims and doesn't have worry about contacts or glasses during the day.

At 15 she is loving the [OCR] lenses."

Janice B

"I have been wearing [OCR] lenses since grade 4 and could not be happier with them. One of my favorite things about them is that I can have great vision throughout the day without having the hassle of glasses or contacts. Since my vision is corrected at night while I sleep, during the day I can go to school, dance class and other activities without having to decide which corrective tools would be most appropriate. They are also convenient for travel. I am very satisfied with my vision while using [OCR] lenses."
